Chris Butler Associates wins Partnership with PRoTECT Project

London, UK –

We are delighted to announce Chris Butler Associates Ltd (CBA) has been appointed to provide solutions for the Proof of Concept phase of the PRoTECT Project.

CBA will deploy its SCIMON Artificial Intelligence and Deep Machine Learning solution to demonstrate wide-ranging object and behavioral identification in a complex city-scape environment. CBA will demonstrate how they can effectively monitor and alert for specific threat-actors behaving in ways which may indicate risk in security-based scenarios in a crowded city environment using live CCTV and their leading-edge analytics.

The PRoTECT Project aims to strengthen local authorities' capabilities in Public Protection by putting in place an overarching concept where tools, technology, training and field demonstrations will lead to situational awareness and improve direct responses to secure public places pre, in, and after a terrorist threat.

PRoTECT is funded by the European Union's ISF-Police Action Grant, under grant agreement no 815356 and is an initiative of the Core group of the European Network of Law Enforcement Technology Services (ENLETS)

"We are thrilled to be working on this new partnership. It will demonstrate ability to, not only monitor incidents as they are happening but to highlight 'precursor' behaviours such as hostile reconnaissance and actually prevent incidents occurring." Chris Butler, Founder of CBA.

The solutions provided by CBA will give PRoTECT customers the best opportunity to prevent undesired outcomes happening. Their technology will monitor for key activities (behaviours) wherever CCTV is monitoring; this means that customers are alerted the moment something they are concerned about starts to happen without them having to deploy people to constantly watch every camera, saving both time and money.

About Chris Butler Associates:

Christ Butler Associates have over 30 years' experience in technology solutions and provide an advanced managed service for artificial intelligence and machine learning tools.

About PRoTECT

The PRoTECT project aims to strengthen local authorities' capabilities in Public Protection by putting in place an overarching concept where tools, technology, training and field demonstrations will lead to situational awareness and improve direct responses to secure public places pre, in, and after a terrorist threat.
